

m6A on nascent transcripts of L1 / Alu / SVA subfamilies (K562)

MINT-Seq (m6A IP on nascent RNA) over matched TT-Seq input, 2 replicates pooled, per TE copy and length-normalised.

Bars are the shift in median per-copy log2 ratio relative to all tested copies in the same orientation; Mann-Whitney q < 0.05, ≥ 20 copies over the input-coverage floor.

Alu L1 SVA
